REGULATIONS 2021
CHOICE BASED CREDIT SYSTEM

B.E. AUTOMOBILE ENGINEERING

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

I. Excel in their professional career in automobile industry
II. Display research contribution with highest professional and ethical standards.
III. Apply the mathematical, scientific and engineering knowledge acquired in automobile engineering in growth of the industry.
IV. Demonstrate professionalism and team work in their career
V. Adapt to contemporary, technological and industrial trends by involving in life-long learning.

PROGRAM OUTCOMES (POs)

| PO	GRADUATE ATTRIBUTE
1	**Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2	**Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3	**Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4	**Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5	**Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
6	**The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7	**Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9	**Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10	**Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11   **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12   **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

1. The knowledge of humanities, basic sciences and management principles in the automobile industry
2. The knowledge of engineering sciences in field of automobile engineering for the development of sustainable society
3. The attitude of lifelong learning and ethical practices in their profession to assess societal, health, safety, legal and cultural issues

Automotive Functional Safety	Computer Integrated Manufacturing in Automotive Sector	Automotive Instrumentation	Space vehicles	Finite Element Analysis	Container Logistics	Entrepreneurship Development	Lean Six Sigma
Fuel cell Technologies	Computational Aero Dynamics	Testing and Measurement Systems	Gas Dynamics and Jet Propulsion	New Product Development Process	Logistics in Manufacturing, Supply Chain and Distribution	Disaster Management	Renewable Sources of Energy
Autonomous and Connected Vehicles	CFD and Heat transfer	Homologation	Drone Technologies	Automotive Product Life Cycle Management	Data Science	Advance Theory of IC Engines	Vehicle Air-Conditioning
Sensors and Actuators	Digital Manufacturing of Automobiles	IC Engine Process Modelling	-	Dynamics of Ground Vehicles	-	Operations Research	Solar Energy Technology

Registration of Professional Elective Courses from Verticals:
Professional Elective Courses will be registered in Semesters V and VI. These courses are listed in groups called verticals that represent a particular area of specialisation / diversified group. Students are permitted to choose all the Professional Electives from a particular vertical or from different verticals. Further, only one Professional Elective course shall be chosen in a semester horizontally (row-wise). However, two courses are permitted from the same row, provided one course is enrolled in Semester V and another in semester VI.
The registration of courses for B.E./B.Tech (Honours) or Minor degree shall be done from Semester V to VIII. The procedure for registration of courses explained above shall be followed for the courses of B.E/B.Tech (Honours) or Minor degree also. For more details on B.E./B.Tech (Honours) or Minor degree refer to the Regulations 2021, Clause 4.10.

Total number of courses per vertical may change as 6 or 7 or 8. If there is shortage of courses in a vertical then necessary courses may be chosen from another vertical of the same programme.

PROGRESS THROUGH KNOWLEDGE

ENROLLMENT FOR B.E. / B. TECH. (HONOURS) / MINOR DEGREE (OPTIONAL)

A student can also optionally register for additional courses (18 credits) and become eligible for the award of B.E. / B. Tech. (Honours) or Minor Degree.

For B.E. / B. Tech. (Honours), a student shall register for the additional courses (18 credits) from semester V onwards. These courses shall be from the same vertical or a combination of different verticals of the same programme of study only.

For minor degree, a student shall register for the additional courses (18 credits) from semester V onwards. All these courses have to be in a particular vertical from any one of the other programmes, Moreover, for minor degree the student can register for courses from any one of the following verticals also.

Complete details are available in clause 4.10 of Regulations 2021.

VERTICALS FOR MINOR DEGREE
(In addition to all the verticals of other programmes)

Vertical I	Vertical II	Vertical III	Vertical IV	Vertical V
Fintech and Block Chain	Entrepreneurship	Public Administration	Business Data Analytics	Environment and Sustainability
Financial Management	Foundations of Entrepreneruship	Principles of Public Administration	Statistics for Management	Sustainable infrastructure Development
Fundamentals of Investment	Team Building and Leadership Management for Business	Constitution of India	Datamining for Business Intelligence	Sustainable Agriculture and Environmental Management
Banking, Financial Services and Insurance	Creativity and Innovation in Entrepreneurship	Public Personnel Administration	Human Resource Analytics	Sustainable Bio Materials
Introduction to Blockchain and its Applications	Principles of Marketing Management for Business	Administrative Theories	Marketing and Social Media Web Analytics	Materials for Energy Sustainability
Fintech Personal Finance and Payments	Human Resource Management for Entrepreneurs	Indian Administrative System	Operation and Supply Chain Analytics	Green Technology
Introduction to Fintech	Financing New Business Ventures	Public Policy Administration	Financial Analytics	Environmental Quality Monitoring and Analysis
-	-	-	-	Integrated Energy Planning for Sustainable Development
-	-	-	-	Energy Efficiency for Sustainable Development

(Choice of courses for Minor degree is to be made from any one vertical of other programmes or from anyone of the following verticals)

VERTICAL 1: FINTECH AND BLOCK CHAIN

SL. NO.	COURSE CODE	COURSE TITLE	CATE GORY	PERIODS PER WEEK			TOTAL CONTACT PERIODS	CREDITS
				L	T	P		
1.	CMG331	Financial Management	PEC	3	0	0	3	3
2.	CMG332	Fundamentals of Investment	PEC	3	0	0	3	3
3.	CMG333	Banking, Financial Services and Insurance	PEC	3	0	0	3	3
4.	CMG334	Introduction to Blockchain and its Applications	PEC	3	0	0	3	3
5.	CMG335	Fintech Personal Finance and Payments	PEC	3	0	0	3	3
6.	CMG336	Introduction to Fintech	PEC	3	0	0	3	3

VERTICAL 2: ENTREPRENERUSHIP

SL. NO.	COURSE CODE	COURSE TITLE	CATE GORY	PERIODS PER WEEK			TOTAL CONTACT PERIODS	CREDITS
				L	T	P		
1.	CMG337	Foundations of Entrepreneruship	PEC	3	0	0	3	3

MA3351   TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS   L T P C
3 1 0 4

OBJECTIVES:
- To introduce the basic concepts of PDE for solving standard partial differential equations.
- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems.
- To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
- To acquaint the student with Fourier, transform techniques used in wide variety of situations.
- To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems.

UNIT I   PARTIAL DIFFERENTIAL EQUATIONS   9+3
Formation of partial differential equations –Solutions of standard types of first order partial differential equations - First order partial differential equations reducible to standard types- Lagrange's linear equation - Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non-homogeneous types.

UNIT II   FOURIER SERIES   9+3
Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series and cosine series – Root mean square value – Parseval's identity – Harmonic analysis.

UNIT III   APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS   9+3
Classification of PDE – Method of separation of variables - Fourier series solutions of one-dimensional wave equation – One dimensional equation of heat conduction – Steady state solution of two-dimensional equation of heat conduction (Cartesian coordinates only).

UNIT IV   FOURIER TRANSFORMS   9+3
Statement of Fourier integral theorem– Fourier transform pair – Fourier sine and cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT V   Z - TRANSFORMS AND DIFFERENCE EQUATIONS   9+3
Z-transforms - Elementary properties – Convergence of Z-transforms - – Initial and final value theorems - Inverse Z-transform using partial fraction and convolution theorem - Formation of difference equations – Solution of difference equations using Z - transforms.

TOTAL: 60 PERIODS
OUTCOMES:
Upon successful completion of the course, students should be able to:
- Understand how to solve the given standard partial differential equations.
- Solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
- Appreciate the physical significance of Fourier series techniques in solving one and two-dimensional heat flow problems and one-dimensional wave equations.
- Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.
- Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.

ME3393	MANUFACTURING PROCESSES	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1. To illustrate the working principles of various metal casting processes.
2. To learn and apply the working principles of various metal joining processes.
3. To analyse the working principles of bulk deformation of metals.
4. To learn the working principles of sheet metal forming process.
5. To study and practice the working principles of plastics molding.

UNIT – I   METAL CASTING PROCESSES   9

Sand Casting – Sand Mould – Type of patterns - Pattern Materials – Pattern allowances – Molding sand Properties and testing – Cores –Types and applications – Molding machines – Types and applications– Melting furnaces – Principle of special casting processes- Shell, investment – Ceramic mould – Pressure die casting – low pressure, gravity- Tilt pouring, high pressure die casting- Centrifugal Casting – CO2 casting –- Defects in Sand casting process-remedies

UNIT II   METAL JOINING PROCESSES   9

Fusion welding processes – Oxy fuel welding – Filler and Flux materials-–Arc welding, Electrodes, Coating and specifications – Gas Tungsten arc welding –Gas metal arc welding - Submerged arc welding – Electro slag welding– Plasma arc welding —— Resistance welding Processes -Electron beam welding –Laser beam Welding Friction welding – Friction stir welding – Diffusion welding – Thermit Welding, Weld defects – inspection &remedies – Brazing - soldering – Adhesive bonding.

UNIT III   BULK DEFORMATION PROCESSES   9

Hot working and cold working of metals – Forging processes – Open, impression and closed die forging – cold forging- Characteristics of the processes – Typical forging operations – rolling of metals – Types of Rolling – Flat strip rolling – shape rolling operations – Defects in rolled parts – Principle of rod and wire drawing – Tube drawing – Principles of Extrusion – Types – Hot and Cold extrusion. Introduction to shaping operations.

UNIT IV   SHEET METAL PROCESSES   9

Sheet metal characteristics – Typical shearing, bending and drawing operations – Stretch forming operations – Formability of sheet metal – Test methods –special forming processes - Working principle and applications – Hydro forming – Rubber pad forming – Metal spinning – Introduction of Explosive forming, magnetic pulse forming, peen forming, Super plastic forming – Micro forming – Incremental forming.

UNIT V   MANUFACTURE OF PLASTIC COMPONENTS   9

Types and characteristics of plastics – Molding of thermoplastics & Thermosetting polymers– working principles and typical applications – injection molding – Plunger and screw machines – Compression

molding, Transfer Molding – Typical industrial applications – introduction to blow molding – Rotational molding – Film blowing – Extrusion – Thermoforming – Bonding of Thermoplastics- duff moulding.

TOTAL :45 PERIODS

OUTCOMES:
At the end of the course the students would be able to
1. Explain the principle of different metal casting processes.
2. Describe the various metal joining processes.
3. Illustrate the different bulk deformation processes.
4. Apply the various sheet metal forming process.
5. Apply suitable molding technique for manufacturing of plastics components.

PROGRESS THROUGH KNOWLEDGE

AU3301   **THERMODYNAMICS AND HEAT TRANSFER**   **L T P C**
           (Use of standard Steam tables with mollier chart and Refrigerant   **3 0 0 3**
                                         tables are permitted)

COURSE OBJECTIVES:
The objective of this course is to prepare the students with the knowledge of basic principles of thermodynamics via real world engineering examples in order to apply, analyse and evaluate air standard cycles, Steam power cycles and Refrigeration and Air conditioning cycles

UNIT I   BASIC THERMODYNAMICS   9
Systems, closed, open and isolated. Property, state, path and process, quasi-static process, Zeroth low, First law. Steady flow energy equation. Engineering Applications of Steady flow energy equation Heat and work transfer in flow and non-flow processes. Simple problems-Second law, Kelvin-Planck statement – Clausius statement - Concept of Entropy (descriptive).

UNIT II   AIR STANDARD CYCLES AND COMPRESSORS   9
Cycle, Carnot cycle, Otto, Diesel, Dual combustion and Brayton cycles; Calculation of Air standard efficiency (simple problems). Mean effective pressure (Definition only). Compressors, Classifications of compressors, Reciprocating compressor- Rotary, Axial and Vane compressors (descriptive).

UNIT III   STEAM PROPERTIES AND CYCLE   9
Formation of steam and its thermodynamic properties, T-s and h-s diagrams. Properties of steam, Dryness fraction, Quality of steam by steam tables and Mollier chart – simple Rankine cycle, Efficiency, Steam Nozzles, Types of nozzles, Friction in nozzles (descriptive)

UNIT IV   REFRIGERATION AND AIR-CONDITIONING   9
Construction and working principles of refrigeration, Vapour compression system - Vapour absorption types, comparison – Definition of Co-efficient of performance (COP), Properties of refrigerants – Basic Principle, Summer, winter and Year round Air conditioning.

UNIT V   INTRODUCTION TO HEAT TRANSFER   9
Modes of heat transfer, Heat conduction in parallel, radial and composite wall – Heat conduction through hollow and composite cylinders, spheres (simple problems). Basics of Convective heat transfer and Fundamentals of Radiative heat transfer (descriptive only)– Types of heat exchangers, Arithmetic and Logarithmic Mean Temperature Difference (AMTD & LMTD).

                                                                    TOTAL: 45 PERIODS

COURSE OUTCOMES:
Upon completion of this course, the students will be able to,
1. Demonstrate the understanding of the nature of the thermodynamic processes for pure substances of ideal gases
2. Interpret First Law of Thermodynamics and its application to systems and control volumes
3. Solve any flow specific problem in an engineering approach based on basic concepts and logic sequences.
4. Compare and contrast between various types of refrigeration cycles
5. Understand the basics and modes of heat transfer

ME3351	ENGINEERING MECHANICS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1 To Learn the use scalar and vector analytical techniques for analysing forces in statically determinate structures

2 To introduce the equilibrium of rigid bodies, vector methods and free body diagram

3 To study and understand the distributed forces, surface, loading on beam and intensity.

4 To learn the principles of friction, forces and to determine the apply the concepts of frictional forces at the contact surfaces of various engineering systems.

5 To develop basic dynamics concepts – force, momentum, work and energy;

UNIT I   STATICS OF PARTICLES   9
Fundamental Concepts and Principles, Systems of Units, Method of Problem Solutions, Statics of Particles - Forces in a Plane, Resultant of Forces, Resolution of a Force into Components, Rectangular Components of a Force, Unit Vectors. Equilibrium of a Particle- Newton's First Law of Motion, Space and Free-Body Diagrams, Forces in Space, Equilibrium of a Particle in Space.

UNIT II   EQUILIBRIUM OF RIGID BODIES   9
Principle of Transmissibility, Equivalent Forces, Vector Product of Two Vectors, Moment of a Force about a Point, Varignon's Theorem, Rectangular Components of the Moment of a Force, Scalar Product of Two Vectors, Mixed Triple Product of Three Vectors, Moment of a Force about an Axis, Couple - Moment of a Couple, Equivalent Couples, Addition of Couples, Resolution of a Given Force into a Force -Couple system, Further Reduction of a System of Forces, Equilibrium in Two and Three Dimensions - Reactions at Supports and Connections.

UNIT III   DISTRIBUTED FORCES   9
Centroids of lines and areas – symmetrical and unsymmetrical shapes, Determination of Centroids by Integration, Theorems of Pappus-Guldinus, Distributed Loads on Beams, Centre of Gravity of a Three-Dimensional Body, Centroid of a Volume, Composite Bodies, Determination of Centroids of Volumes by Integration. Moments of Inertia of Areas and Mass - Determination of the Moment of Inertia of an Area by

Integration, Polar Moment of Inertia, Radius of Gyration of an Area, Parallel-Axis Theorem, Moments of Inertia of Composite Areas, Moments of Inertia of a Mass - Moments of Inertia of Thin Plates, Determination of the Moment of Inertia of a Three-Dimensional Body by Integration.

UNIT IV   FRICTION   9
The Laws of Dry Friction, Coefficients of Friction, Angles of Friction, Wedge friction, Wheel Friction, Rolling Resistance, Ladder friction.

UNIT V   DYNAMICS OF PARTICLES   9
Kinematics - Rectilinear Motion and Curvilinear Motion of Particles. Kinetics- Newton's Second Law of Motion -Equations of Motions, Dynamic Equilibrium, Energy and Momentum Methods - Work of a Force, Kinetic Energy of a Particle, Principle of Work and Energy, Principle of Impulse and Momentum, Impact of bodies.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course the students would be able to
1. Illustrate the vector and scalar representation of forces and moments
2. Analyse the rigid body in equilibrium
3. Evaluate the properties of distributed forces
4. Determine the friction and the effects by the laws of friction
5. Calculate dynamic forces exerted in rigid body

                                                                       3 0 0 3

COURSE OBJECTIVES:
The objective of this course is to prepare the students to learn the basics of fluid statics and dynamics, and solve numerical related to equations of fluid motion, fluid flow in pipes, dimensional analysis, model studies and hydraulic machinery

UNIT I   BASIC CONCEPTS   9
Classification of fluids and their properties – Measurement of pressure and viscosity – Fluid statics and force on submerged bodies – Stability of floating bodies.

UNIT II   EQUATIONS OF FLUID FLOW   9

Kinematics – Motion of a fluid particle – Fluid deformation – Navier Stokes equation and Euler's equation – Basic laws of fluid motion in integral form and differential form - Linear momentum equation.

UNIT III   INCOMPRESSIBLE INVISCID AND VISCOUS FLOWS   9

Bernoulli's equations – Applications –— Flow measurement – Orifice plate – Venturi meter – Fully developed laminar flow between parallel plates – Laminar and turbulent flow through pipes – Velocity profiles – Energy considerations in pipe flow – Calculation of head loss Pipe flow problems – Hydraulic and energy grade lines.

UNIT IV   DIMENSIONAL ANALYSIS ANDMODELSTUDIES   9

Dimensional analysis – non-dimensional numbers - The Buckingham-Pi theorem – Significant dimensionless groups – Flow similarity and model studies-
UNIT V   HYDRAULIC MACHINERY FOR VEHICLE APPLICATIONS   9

Impact of jets - Euler's equation - Classification of turbines – heads and efficiencies – velocity triangles. Turbochargers – selection of type, working principle - Reciprocating pump, Rotary pumps –classification and working principle. Fuel pumps – selection of type and working principle.

                                                                TOTAL: 45 PERIODS
COURSE OUTCOMES:
Upon completion of this course, the students will be able to,
1.   Apply the basic concepts of fluids statics and dynamics
2.   Summarize the concepts of flow governing equations
3.   Generate solutions to complex pipe flow problems
4.   Interpret the results of dimensional analysis
5.   Understand the applications of fluid machinery in automotives

                                                                                3 0 0 3

COURSE OBJECTIVES:

The objective of this course is to prepare the students with the knowledge on basics of constructional and working principles of automotive SI and CI engines along with their sub systems, thermochemistry of fuel-air mixtures, combustion process, performance and emission characteristics of IC engines.

UNIT I   ENGINE FUNDAMENTALS   9

Engine types and their operation- classifications – Terminology- Four stroke and two stroke cycle- Engine components, working principle of SI and CI engines - Engine operating parameters- Fuel –air and actual cycle analysis – Engine emissions – valve and port timing diagram – firing order

UNIT II   INDUCTION AND IGNITION SYSTEM   9

Carburettors – mixture requirements - working principles, different circuits – Requirements and objective of injection system – types of injection - Jerk and distributor type pumps, Unit injector, common rail direct injection - Electronic fuel injection – GDI, Injection timing, Injection lag. Types of injection nozzle, Nozzle tests. Spray characteristics. Split and Multiple injection. Mechanical and pneumatic governors. Ignition system- battery coil, magneto coil and Electronic ignition system

UNIT III   COMBUSTION OF FUELS   9

Combustion in SI engine - Stages of combustion- Flame Propagation- Rate of pressure rise- Abnormal combustion- combustion chambers – design objectives and types Engine Knock Thermodynamic analysis of SI engine combustion- Burned and Unburned mixture states – combustion process characterization- CI Engine - Importance of air motion – Swirl, Squish and Tumble. Swirl ratio. Stages of combustion. Delay period – factors affecting delay period. knock in CI & SI engines. Direct and indirect injection combustion chambers for diesel combustion.

UNIT IV   ENGINE COOLING, LUBRICATING AND EXHAUST SYSTEM   9

Cooling system – Function- types - working principle - Lubricating system- Function- types - Lubricant Requirements Necessity and limitation of supercharging. Types of supercharger and turbocharger. Intercooler. Matching of turbocharger. Modification of an engine for supercharging. Effect of supercharging on engine performance- exhaust system- exhaust manifold - muffler types.

UNIT V   ENGINE TESTING AND MEASUREMENTS   9

Engine testing and measuring equipment- Indicated and brake MEP, operating variables that affect engine performance, efficiency and emission – Automotive and stationary engine testing and related standards – use of transient dynamometer for engine testing. Engine power– measurement of indicated power-brake power- frictional power- efficiencies – Heat balance – Methods to improve engine performance.

TOTAL: 45 PERIODS

COURSE OUTCOMES:

Upon completion of this course, the students will be able to,
1.   Identify various components of SI and CI engines
2.   Explain the functions of IC engine sub-systems like Ignition, cooling and lubrication
3.   Understand the actual engine working principle and its thermochemistry of fuel-air mixtures
4.   Describe the basic knowledge on SI and CI engine combustion and its related parameters
5.   Apply their knowledge in analyzing the engine performance and pollution characteristics.

COURSE OBJECTIVES:
The objective of this course is to prepare the students to conduct experiments in order to understand the various physical characterization, mechanical properties and testing methods of materials, performance of fluid flow measuring devices and fluid machinery.

LIST OF EXPERIMENTS
1.   Tension Test
2.   Torsion Test
3.   Testing of springs
4.   Impact test i) Izod, ii) Charpy
5.   Hardness test i) Vickers, ii) Brinell, iii) Rockwell, iv) Shore
6.   Deflection of Beams
7.   Mass Moment of inertia of connecting rods
8.   Determination of the Coefficient of discharge of given Orifice meter.
9.   Determination of the Coefficient of discharge of given Venturi meter.
10.   Calculation of the rate of flow using Rota meter.
11.   Determination of friction factor for a given set of pipes.
12.   experiments and drawing the characteristic curves of centrifugal pump
13.   Experiments and drawing the characteristic curves of reciprocating pump.
14.   Experiments and drawing the characteristic curves of Gear pump.
15.   Experiments and drawing the characteristic curves of Pelton wheel / Francis turbine/ Kaplan turbine

                                                    TOTAL: 60 PERIODS

COURSEOUTCOMES
 Upon completion of this course, the students will be able to,
1.   Conduct experiments to understand the physical characterization of materials.
2.   Identify the various experimental testing methods for of mechanical properties of
       materials.
3.   Evaluate the basics of fluid flow characteristics.
4.   Measure experimentally the Performance characteristics of pumps.
5.   Determine experimentally the Performance characteristics of turbines.

COURSE OBJECTIVES:

1. To Selecting appropriate tools, equipment's and machines to complete a given job.
2. To Performing various welding process using GMAW and fabricating gears using gear making machines.
3. To Performing various machining process such as rolling, drawing, turning, shaping, drilling, milling and analysing the defects in the cast and machined components.

LIST OF EXPERIMENTS

1. Fabricating simple structural shapes using Gas Metal Arc Welding machine.
2. Preparing green sand moulds with cast patterns.
3. Taper Turning and Eccentric Turning on circular parts using lathe machine.
4. Knurling, external and internal thread cutting on circular parts using lathe machine.
5. Shaping – Square and Hexagonal Heads on circular parts using shaper machine.
6. Drilling and Reaming using vertical drilling machine.
7. Milling contours on plates using vertical milling machine.
8. Cutting spur and helical gear using milling machine.
9. Generating gears using gear hobbing machine.
10. Generating gears using gear shaping machine.
11. Grinding components using cylindrical and centerless grinding machine.
12. Grinding components using surface grinding machine.
13. Cutting force calculation using dynamometer in milling machine
14. Cutting force calculation using dynamometer in lathe machine

LIST OF EQUIPMENT FOR BATCH OF 30 STUDENTS

S.No.	NAME OF THE EQUIPMENT	Qty.
1.	Centre Lathes	7 Nos.
2.	Shaper	1 No.

9.	Milling Tool Dynamometer	1 No.
10.	Gear Hobbing Machine	1 No.
11.	Gear Shaping Machine	1 No.
12.	Arc welding transformer with cables and holders	2 Nos.
13.	Oxygen and Acetylene gas cylinders, blow pipe and other welding outfit	1 No.
14.	Moulding table, Moulding equipments	2 Nos.

TOTAL:60 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Demonstrate the safety precautions exercised in the mechanical workshop and join two metals using GMAW.
2. The students able to make the work piece as per given shape and size using machining process such as rolling, drawing, turning, shaping, drilling and milling.
3. The students become make the gears using gear making machines and analyze the defects in the cast and machined components

                                                                                          3 0 0 3

COURSE OBJECTIVES:

The objective of this course is to prepare the students to understand the role, properties and testing of various fuels and lubricants in the design and operation of IC engines

UNIT I   REFINERY OF FUELS AND LUBRICANTS   9
Introduction to Structure of petroleum, refining Process-Distillation, cracking processes, Catalytic reforming, alkylation, isomerisation and polymerization, finishing process- blending, products of refining process. Manufacture of lubricating oil base stocks, manufacture of finished automotive lubricants.

UNIT II   THEORY OF LUBRICATION   9
Engine friction: introduction, total engine friction, effect of engine variables on friction, hydrodynamic lubrication, elastic hydrodynamic lubrication, boundary lubrication, bearing lubrication, functions of the lubrication system, introduction to design of a lubricating system

UNIT III   LUBRICANTS   9
Specific requirements for automotive lubricants, oxidation deterioration and degradation of lubricants, additives and additive mechanism, synthetic lubricants, classification of lubricating oils, properties of lubricating oils, tests on lubricants. Grease, classification, properties, test used in grease- lubricants for gearbox, brake, differential and steering systems

UNIT IV   PROPERTIES AND TESTING OF FUELS   9
Properties and testing of fuels- density, calorific value, cetane and octane number, flash point, fire point, distillation, vapour pressure, spontaneous ignition temperature, viscosity, cloud and pour point, flammability, ignitability, diesel index, API gravity, aniline point, carbon residue, copper strip corrosion. Test on used lubricants. Biofuel-properties and testing.

UNIT V   **TESTING INSTRUMENTS**   **9**

Working principles and types – viscometers, calorimeters, flash and fire point apparatus, cloud and pour point apparatus, distillation apparatus, penetrometer, carbon residue apparatus, CFR engine, vapour pressure testing equipment, copper strip equipment, Aniline point apparatus - Ash content testing equipment - specifications of fuels. ASTM and SAE standards - FTIR-GCMS analysers

TOTAL: 45 PERIODS

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Identify the fuels and lubricants for automotive applications
- Understand the properties of fuels and lubricants and its testing equipment
- Evaluate the properties of fuels and lubricants
- Select suitable fuel and lubricant testing equipment
- Analyse the behaviour of fuels and lubricants

AU3402   **AUTOMOTIVE CHASSIS**   **L T P C**

                                                         3 0 0 3

COURSE OBJECTIVES:

The objective of this course is to prepare the students to understand the basics of various vehicle frames, front axles, steering, suspension and braking systems used in automobile.

UNIT I   INTRODUCTION, FRAME, STEERING SYSTEM   9

Types of Chassis layout, with reference to Power Plant location and drive, various types of frames, Loads acting on vehicle frame, Constructional details and materials for frames, Testing of frames, Types of Front Axles and Stub Axles, Front Wheel Geometry, Condition for True Rolling Motion of Wheels during Steering, Ackerman's and Davis Steering Mechanisms, Steering Error Curve, Steering Linkages, Different Types of Steering Gears, Slip Angle, Over–Steer and Under–Steer, Reversible and Irreversible Steering, EPAS.

UNIT II   PROPELLER SHAFT AND FINAL DRIVE   9

Effect of Driving Thrust, torque reactions and side thrust, Hotchkiss drive, torque tube drive, radius rods and stabilizers, Propeller Shaft, Universal Joints, Constant Velocity Universal Joints, Front Wheel drive, Final drive, different types, Double reduction and twin speed final drives, Multi–axled vehicles, Differential principle and types, Differential housings, limited speed differential, Differential locks.

UNIT III   AXLES AND TYRES   9

Construction and Design of Drive Axles, Types of Loads acting on drive axles, Full – Floating, Three–Quarter Floating and Semi–Floating Axles, Axle Housings and Types – Lift axle, Dead axle, Types and Constructional Details of Different Types of Wheels and Rims, Different Types of Tyres and their constructional details.

UNIT IV   SUSPENSION SYSTEM   9

Need for Suspension System, Types of Suspension Springs, Constructional details and characteristics of Single Leaf, Multi–Leaf, Coil, and Torsion bar, Rubber, Pneumatic and Hydro – elastic Suspension Spring Systems, Independent Suspension System, Shock Absorbers, Types and Constructional details.

UNIT V   BRAKING SYSTEM   9

Theory of Automobile Braking, Stopping Distance Time and Braking Efficiency, Effect of Weight Transfer during Braking, Theory of Drum Brakes, Loading and Trailing Shoes, Braking Torque, Constructional Details of Drum Brake and its Activators, Disc Brake Theory, Types and Construction, Hydraulic Braking System, Mechanical Braking System, Pneumatic Braking System, Power–Assisted Braking System, Anti–Lock Braking System, Constructional Details.

                                                        TOTAL = 45 PERIODS

COURSE OUTCOMES:

At the end of this course, the student will be able to

1.   Identify the different types of frame and chassis used in Automotive.
2.   Classify the different types of drivelines and drives used in Automotive.
3.   Acquire knowledge about different types of front axle and rear axles used in motor vehicles.
4.   Examine the working principle of conventional and independent suspension systems.
5.   Apply knowledge on working principles of brake and its subsystems.

AU3403 **VEHICLE BODY ENGINEERING** **L T P C**
3 0 0 3

COURSE OBJECTIVES:

The objective of this course is to prepare the students with the knowledge on the body construction details of light, heavy and commercial vehicles, along with the vehicle aerodynamics and body materials

UNIT I   CAR BODY DETAILS   9

Types of Car body - Saloon, convertibles, Limousine, Estate Van, Racing and Sports car –car body terminology - Visibility- regulations, driver's visibility, improvement in visibility and tests for visibility. Driver seat design -Car Body Construction -Various panels in car bodies. Safety: Safety design, safety equipment for cars.

UNIT II   BUS BODY DETAILS   9

Types of bus body: based on capacity, distance travelled and based on construction. – Bus body lay out, floor height, engine location, entrance and exit location. Types of metal sections used – Regulations – Constructional details: Conventional and integral.

UNIT III   COMMERCIAL VEHICLE DETAILS   8

Types of commercial vehicle bodies - Light commercial vehicle body. Construction details of Flat platform body, Tipper body and Tanker body – Dimensions of driver's seat in relation to controls – Driver's cab design.

UNIT IV   VEHICLE AERODYNAMICS   **9**

Objectives, Vehicle drag and types. Various types of forces and moments. Effects of forces and moments. Side wind effects on forces and moments. Various body optimization techniques for minimum drag. Wind tunnels – Principle of operation, Types. Wind tunnel testing such as: Flow visualization techniques, Airflow management test – measurement of various forces and moments by using wind tunnel balance.

UNIT V   BODY MATERIALS, TRIM, MECHANISMS AND BODY REPAIR   9

Types and properties of materials used in body construction and insulation -Such as steel sheet, timber, plastics and GRP, Insulation materials. Body trim items-body mechanisms. Hand tools-power tools for body repair. Vehicle corrosion-Anticorrosion methods-Modern painting process procedure.

                                                                    TOTAL = 45 PERIODS

COURSE OUTCOMES:

Upon completion of the course, the student will be able to
1. Understand the different aspects of car body
2. Differentiate the bus and commercial vehicle bodies.
3. Describe the role of various aerodynamic forces and moments, measuring instruments in vehicle body design.
4. Identify the materials used in body building,
5. Select hand tools for body repairs and maintenance.

                                                     3   0   0   3

COURSE OBJECTIVES:
The main learning objective of this course is to prepare students for:
1. Applying the principle concepts behind stress, strain and deformation of solids for various engineering applications.
2. Analyzing the transverse loading on beams and stresses in beam for various engineering applications.
3. Understanding the torsion principles on shafts and springs for various engineering applications.
4. Acquiring knowledge on the deflection of beams for various engineering applications.
5. Interpreting the thin and thick shells and principal stresses in beam for various engineering applications

UNIT I   STRESS, STRAIN AND DEFORMATION OF SOLIDS   9
Rigid and Deformable bodies – Strength, Stiffness and Stability – Stresses and Strains: Tensile, Compressive and Shear – Material Behaviour- Elastic Vs Plastic – Response of Real Materials: Tensile Test, Compressive Test, Shear Test, Cyclic Tests - strain gauges and rosettes – Deformation of Statically determinate and In-determinate bars of variable cross-section & Composite section under axial load – Thermal stress – Elastic constants – Plane Strain – Volumetric Strain.

UNIT II   TRANSVERSE LOADING ON BEAMS AND STRESSES IN BEAM   9
Beams – types transverse loading on beams – Shear force and bending moment in beams – Cantilevers – Simply supported beams and over – hanging beams. Theory of simple bending– Bending stress distribution – Flitched beams – Shear stress distribution.

UNIT III   TORSION   9
Torsion formulation stresses and deformation in circular and hollows shafts – Stepped shafts – Deflection in shafts fixed at the both ends – Stresses in helical springs – Deflection of helical springs, – Closed and Open Coiled helical springs – springs in series and parallel, carriage springs.

UNIT IV   DEFLECTION OF BEAMS   9
Slope, Deflection and Radius of Curvature – Methods of Determination of Slope and Deflection-Double Integration method – Macaulay's method – Area moment Theorems for computation of slopes and deflections in beams - Conjugate beam and strain energy – Maxwell's reciprocal theorems.

UNIT V   THICK & THIN SHELLS & PRINCIPAL STRESSES   9
Stresses in thin cylindrical shell due to internal pressure, circumferential and longitudinal stresses and deformation in thin cylinders – spherical shells subjected to internal pressure – Deformation in spherical shells – Lame's theory – Application of theories of failure – Stresses on inclined planes –principal stresses and principal planes – Mohr's circle of stress.
                                                  TOTAL: 45 PERIODS
COURSE OUTCOMES:
Upon completion of this course, the students will be able to:
1. Apply the principle concepts behind stress, strain and deformation of solids for various engineering applications.
2. Analyze the transverse loading on beams and stresses in beam for various engineering applications.
3. Solve problems based on the torsion principles involved in shafts and springs for various engineering applications.
4. Interpret the results of the deflection of beams.
5. Analyze the thin and thick shells and principal stresses in beam for various engineering applications

COURSE OBJECTIVES:
The objective of this course is to prepare the students to gain knowledge in the construction and principle of mechanical transmission components, hydrodynamic devices, hydrostatic devices, automatic transmission system, Electric drive used in road vehicles.

UNIT I   CLUTCH   9
Requirement of transmission system, Types of transmission system, Requirement of Clutches – Functions-Types of clutches, construction and operation of Single plate, multi plate and Diaphragm spring clutches. Centrifugal clutch, Electronic clutch.

UNIT II   GEAR BOX   9
Purpose of gear box. Construction and working principle of sliding, constant and synchromesh gear boxes, Automatic manual transmission. Introduction to epicycle gear trains, Numerical examples on performance of automobile such as Resistance to motion, Tractive effort, Engine speed & power and acceleration. Determination of gear ratios for different vehicle applications.

UNIT III   HYDRODYNAMIC TRANSMISSION   9
Fluid coupling – principles - Performance characteristics – advantages – limitations – drag torque – reduction of drag torque. Torque converter - principles - Performance characteristics – advantages – limitations – multistage and polyphase torque converters.

UNITIV   HYDROSTATIC DRIVE   9
Hydrostatic drive; various types of hydrostatic systems – Principles of Hydrostatic drive system. Advantages and limitations. Comparison of hydrostatic drive with hydrodynamic drive, construction and working of typical Janny hydrostatic drive.

UNIT V   AUTOMATIC TRANSMISSION AND ELECTRIC DRIVE   9
Wilson gear box- Cotal electric transmission. Chevrolet "Turboglide" transmission. – Four speeds longitudinally mounted automatic transmission -Hydraulic control systems of automatic transmission. Continuously Variable Transmission (CVT) — types – Operations. Electric drive-types- Principle of early and modified Ward Leonard Control system-Advantages & limitations - Automated Manual Transmission (AMT) - Modern electric drives.

TOTAL= 45 PERIODS

COURSE OUTCOMES:
At the end of the course, students will be able to:
1. Understand the construction and working of various types of clutches
2. Determine the gear ratio for different vehicle applications
3. Describe the types and principle of hydrodynamic transmission
4. Compare Hydrostatic and hydrodynamics drives
5. Identify the differences among various automatic transmissions.

GE3451   **ENVIRONMENTAL SCIENCE AND SUSTAINABILITY**   **L T P C**
                                                                          2 0 0 2

COURSE OBJECTIVES:
1.   To study the nature and its impacts on human life.
2.   To study the environmental pollution, its types, control methods and protection acts
3.   To provide the knowledge of about the energy management and energy resources
4.   To study the concepts of Sustainability, global warming and Management
5.   To study the Sustainability   Practices and socio economical changes

UNIT I   ENVIRONMENT AND BIODIVERSITY   9
Definition, scope and importance of environment – need for public awareness. Eco-system and Energy flow– ecological succession. Types of biodiversity: genetic, species and ecosystem diversity– values of biodiversity, India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ.

UNIT II   ENVIRONMENTAL POLLUTION   9
Causes, Effects and Preventive measures of Water, Soil, Air and Noise Pollutions. Solid, Hazardous and E-Waste management. Case studies on Occupational Health and Safety Management system (OHASMS). Environmental protection, Environmental protection acts .

UNIT III   RENEWABLE SOURCES OF ENERGY   9
Energy management and conservation, New Energy Sources: Need of new sources. Different types new energy sources. Applications of- Hydrogen energy, Ocean energy resources, Tidal energy conversion. Concept, origin and power plants of geothermal energy.

UNIT IV   SUSTAINABILITY AND MANAGEMENT   9
Development, GDP, Sustainability- concept, needs and challenges-economic, social and aspects of sustainability-from unsustainability to sustainability-millennium development goals, and protocols-Sustainable Development Goals-targets, indicators and intervention areas Climate change- Global, Regional and local environmental issues and possible solutions-case studies. Concept of Carbon Credit, Carbon Footprint. Environmental management in industry-A case study.

UNIT V   SUSTAINABILITY PRACTICES   9
Zero waste and R concept, Circular economy, ISO 14000 Series, Material Life cycle assessment, Environmental Impact Assessment. Sustainable habitat: Green buildings, Green materials, Energy efficiency, Sustainable transports. Sustainable energy: Non-conventional Sources, Energy Cycles-carbon cycle, emission and sequestration, Green Engineering: Sustainable urbanization- Socio-Economical and technological change.

TOTAL: 30 PERIODS

OUTCOMES:
At the end of the course the students would be able to
1.Understand the nature and its impacts on human life.
2.The students have the knowledge and awareness of Environmental Pollution.
3.Understanding of the energy sources and scientific concepts/principles behind them
4.Understand the concepts of the Sustainability and Management
5.Understand the Sustainability Practices and socio economical changes

AU3411 **VEHICLE COMPONENTS LABORATORY** **L T P C**
0 0 4 2

COURSE OBJECTIVES:
The objective of this course is to prepare the students to acquire skill in identify, dismantling and assembling the parts of an IC engine and its subcomponents like Clutch, Front/Rear axle, steering system, gear boxes and suspension systems.

LIST OF EXPERIMENTS
1. Dismantling, Measurement and Assembling of 1000CC engine
2. Dismantling, Measurement and Assembling of Bus engine
3. Dismantling, Measurement and Assembling of V8 engine
4. Dismantling, Measurement and Assembling of CRDI engine
5. Dismantling, Measurement and Assembling of MPFI engine
6. Dismantling, Measurement and Assembling of Single plate, Diaphragm Clutch.
7. Dismantling, calculation of gear ratio and Assembling of Constant and Sliding mesh gear boxes
8. Dismantling and Assembling of Transfer case.
9. Dismantling, calculation of gear ratio and Assembling of Differential assembly.
10. Dismantling, Measurement and Assembling of Front and Rear axle.
11. Study of different chassis layouts.
12. Study of different braking systems.
13. Study of Steering system
14. Study of Suspension system

TOTAL: 60 PERIODS

COURSE OUTCOMES:
At the end of the course, students will be able to:
1. Dismantle and Assemble the automobile chassis and Engine components
2. Identify & differentiate components of SI & CI engines
3. Understand working of braking, steering, clutch, transmission, Suspension systems.
4. Develop skills in Dismantling and assembling of chassis components.
5. Correct minor repairs and trouble shoots the breakdowns

AU3412 **FUELS AND LUBRICANTS LABORATORY** **L T P C**
0 0 4 2

COURSE OBJECTIVE:

The objective of this course is to prepare the students to attain practical skills during the properties testing procedure for automotive fuels and Lubricants.

LIST OF EXPERIMENTS:
1. Determination of viscosity of lubricating oil by Redwood Viscometer.
2. Determination of viscosity of lubricating oil by Saybolt Viscometer
3. Determination of Flash and Fire points of given sample of fuel and lubricants
4. Determination of Cloud and pour point of given oil.
5. Conduct of ASME distillation test of fuels (gasoline / diesel).
6. Determination of Carbon residue on given sample of lubrication oil.
7. Determination of Calorific value of liquid fuel by using bomb calorimeter.
8. Conduct of Penetration test for the given sample.
9. Determination of Density test of different fuels

TOTAL: 60 PERIODS

COURSE OUTCOMES:

At the end of the course, students will be able to:
Develop skills and understand various testing methods adopted to assess quality of fuels and lubricants like
1. Viscosity
2. Importance of flash, fire point
3. Cloud and pour point
4. Calorific value
5. Density
